Graphics & Procedural Generation
p5.js · GLSL · ShaderLab · Procedural generation

Other Languages
C++ · Python

Tools & Version Control
Git · GitHub · Docker · Netlify

Project Management
Jira · Microsoft Project · Agile methodologies (SCRUM)

LANGUAGES

Spanish Native
English B2 – Cambridge CAE

ABOUT ME

Multimedia Engineer passionate about programming in all its areas, especially when it combines creativity with building rich, memorable user experiences. While my specialisation is frontend development, my training and constant learning also let me work comfortably on backend, mobile apps, video games and virtual reality.

During my degree I spent a full academic year on Erasmus in the Czech Republic, an experience that gave me great autonomy and the ability to adapt to completely new environments. At heart, I enjoy defining the logic that brings interfaces to life and looking for solutions that combine functionality, creativity and a good user experience. In my free time I develop video games in Unity and experiment with my own programming projects.

PROFESSIONAL EXPERIENCE

Freelance Web Developer — Present

FSUPV Team · Formula Student UPV · *Valencia*

- Complete overhaul of the Universitat Politècnica de València Formula Student team's website, covering frontend, backend and feature integration.
- Responsible for the maintenance and future development of the platform.

Internship · Web Development — Oct. 2025 – Dec. 2025

MIP Informática · *Paterna, Valencia*

- Built client websites using WordPress.
- Improved and updated the company's internal website.

EDUCATION

Master's in UX/UI Design — Starting Nov. 2026

Escuela Superior de Arte y Tecnología (ESAT) · *Valencia*

Bachelor's Degree in Multimedia Engineering — 2021 – 2026

ETSE · Universitat de València · *Valencia*

- Full academic year on an Erasmus exchange in the Czech Republic.

FEATURED PROJECTS

Orbital pattern image generator — Sep. 2025 – Jul. 2026

Final Degree Project · *Angular · TypeScript · p5.js*

- Designed and built from scratch an interactive web application that generates images from orbital patterns and epicycloids.
- Multiple generation modes, customisable visual parameters, presets, randomisation, animated playback and export of results, focused on a creative and intuitive experience.
- **Repository:** github.com/IgnacioMol/Epicycloid_generator

FSUPV team web platform — Ongoing

Full stack development · *Formula Student UPV*

- Development and improvement of the team's full web application, working on frontend, backend and the integration of the platform's features.
